

Statistical computation and analysis 2026-2

Course number: 367-1-4361

Course requirements and grading

The course grade is based on four components:

Component	Contribution to course grade
Review activity	5% + up to 2.8% extra credit
Exercises	15%
Midterm quiz	10% magen - can only improve the grade
Final exam	70%

Students must pass the final exam in order to pass the course.

Review activity - 5% + up to 2.8% extra credit

The review activity is designed to reward steady participation and continuous engagement with the course material. Students can earn up to 0.6 grade points for each lecture. Across 13 lectures, this gives a maximum of 7.8 grade points: 5 points count toward the regular course grade, and up to 2.8 additional points count as extra credit.

For each lecture, the review activity grade is calculated as follows:

Situation	WooClap	Tutor activity	Maximum for that lecture
Attended lecture	up to 0.4	up to 0.2 if submitted on time; up to 0.1 if submitted late	0.6
Excused absence from lecture	-	up to 0.6, regardless of submission time	0.6
Unexcused absence from lecture	-	up to 0.3 if submitted on time; up to 0.1 if submitted late	0.3

On time means submitted by the deadline announced for that activity. The purpose of this structure is to encourage attendance and steady work, while also making it possible to keep up with the course when a justified absence occurs.

Exercises - 15%

There will be 3 exercises, each worth 5% of the course grade.

Each exercise will be followed by a WooClap activity in the tutorial after submission. Students must pass this WooClap activity in order to receive full credit for the exercise. If a student does not pass the WooClap activity, the maximum grade for that exercise is 3%, even if the submitted exercise receives a higher score.

Midterm quiz - 10% magen

The midterm quiz is intended as practice for the final exam and can only improve the course grade.

The quiz will take place in a computer room on campus. At the end of the course, the regular grade will be calculated in two ways:

1) With the midterm quiz included: review activity + exercises + midterm quiz + final exam, out of 100.

2) Without the midterm quiz: review activity + exercises + final exam, out of 90, then converted to a grade out of 100.

The student will receive the higher of these two grades. Any extra credit earned through the review activity is added after the regular grade is calculated, subject to the maximum final grade allowed by university rules.

Final exam - 70%

The final exam will take place on computers on campus. It will be closed book, and the instructors will provide a formula sheet. The exam will be 2 hours long.

Students who do not pass the final exam will not pass the course.
